DETAILED ACTION

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

An action on the merits of claims 68-77 is contained below.

35 U.S.C. 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 68-77 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura et al., EP 0799823 A1 and Ruff et al., Journal of Clinical Investigat., vol. 73, pp. 1483-1486.

Kimura et al., teach the analogous diphenylpyrrole compounds of species 1 of the instant invention. Kimura et al. teach that these compounds as cyclooxygenase-2 inhibitors inhibit prostaglandins. Kimura et al. however does not teach the usefulness of these compounds to treat cachexia or disorders resulting from tumors.

Art Unit: 1623

Ruff et al. teach that the inhibition of prostaglandin production counters cachexia or muscle wasting , which adequately bridges the nexus between the differences in the prior art and the invention as claimed.

It would have been prima facie obvious to a person of ordinary skill in the art at the time the invention was made to use the diphenylpyrrole compounds of the instant invention to treat cachexia or side effects of tumor related disorders.

A person of ordinary skill in the art would have been motivated to use these art recognized prostaglandin inhibiting diphenylpyrrole compounds to treat cachexia or side effects of tumor related disorders because the prior art has established the usefulness of prostaglandin inhibitors in countering the muscle wasting or cachexia.
